

DEVELOPING AI-COMPLEMENTARY SKILLS

Driving accelerated judgment development and calibrated trust of AI

THINK

The value of humans is in judgment, understanding the full context, and being human

- Know what you want and why before engaging AI
- Form your own view first, then compare it to AI output
- Surface the AI's reasoning and test it against your own

TEST

Judgment improves through systematic comparison to reference points

- Define what success looks like before you evaluate
- Note where AI exceeds, matches, or falls short of your expectations
- Notice recurring strengths and gaps in AI performance

TRUST

Knowing how much to trust AI in each situation is the master skill

- Treat your trust in AI as task-specific, not a general setting
- Ask yourself: do I know enough here to judge if this is right?
- Calibrate your trust to avoid both over-reliance and underuse
